

LOTUS App Builder Demo Readiness Audit

Repository: onlytrafficfans-gif/Betalotustester
Audit date: 2026-06-30
Audited branch: main
Audited commit: 2e963571642a154f9d6c093bd3ed882af981e9c4

Executive Summary

Gate	Result	Evidence
Fresh clone from GitHub main	PASS	Fresh clone resolved to 2e963571642a154f9d6c093bd3ed882af981e9c4
npm install	PASS	746 packages installed, 747 audited, 0 vulnerabilities
npm run build	PASS	tsc -b and vite build completed; 1794 modules transformed
npm run test:run	PASS	5 test files passed; 69 tests passed
npm run dev	PASS	HTTP 200 from local dev server; title present
Demo safety call	PASS WITH CAVEAT	Working demo path verified; live Supabase auth depends on configured project accepting m

Commands Run From Fresh GitHub Clone

```
git clone https://github.com/onlytrafficfans-gif/Betalotustester.git Betalotustester-fresh-verify
npm install
npm run build
npm run test:run
npm run dev -- --host 127.0.0.1 --port 3001
```

Build Result

```
npm run build
tsc -b && vite build
vite v7.3.6 building client environment for production
1794 modules transformed
dist/index.html 1.38 kB gzip 0.61 kB
dist/assets/index-CJAqlceI.css 67.31 kB gzip 11.96 kB
dist/assets/index-BIQpbSua.js 657.53 kB gzip 187.59 kB
built in 5.20s
```

Build note: Vite emitted a chunk-size warning for the 657.53 kB JavaScript bundle. This is not a TypeScript or build failure.

Test Result

```
npm run test:run
vitest run
Test Files: 5 passed (5)
Tests: 69 passed (69)
Duration: 2.97s
```

Dev Server Smoke

```
DEV_SERVER_URL=http://127.0.0.1:3001
STATUS=200
```

TITLE_PRESENT=True

Fix Scope

- Repaired builder/store/component contract drift.
- Restored project sidebar create, open/switch, rename, and delete actions.
- Expanded MobileTab to match all rendered mobile tabs exactly.
- Restored schema helpers used by tests and runtime: createEmptySchema, defaultAppSchema, validateAppSchema, and mergeSchemaUpdates.
- Aligned AI provider imports and added a safe mock fallback for demo chat generation.
- Aligned LivePreview and appRenderer exports.
- Replaced broken CommonJS export import with ESM and added zip export via jszip.
- Removed broken generated PWA service worker path while keeping real manifest/icon/screenshot/logo assets in public.
- Added package-lock.json for deterministic fresh installs.

Remaining Limitations

Live signup/login was not exercised with a newly created Supabase account during this audit. The app builds, serves, and has persistent Supabase session configuration enabled, but actual account creation depends on the configured Supabase project accepting auth requests.

The PWA generated service worker was removed because it blocked production builds. Manifest and icon references are now valid and safe for the demo; offline precache should be reintroduced only after a dedicated PWA pass.

Final Audit Call

The repository is safe to call a working demo for the acceptance criteria that were locally verifiable from a fresh GitHub clone. The only caveat is live Supabase auth behavior, which depends on the remote Supabase configuration.
